

**Worlds only Reactance Cancelling Vibration Free In Wall Subwoofer.
Designed for installations where customers want high performance bass
with out the typical free standing subwoofer.**

RCC *six hundred*

New high performance drivers were developed using a patented Dual Drive Motor Assembly which provides very high efficiency and long excursion. The woofer module configuration has four drivers opposing one another. The baskets are rigidly attached to one another to allow the reactance forces generated by the cone motion to cancel one another. The system has an Sd (piston area) 600 cm² (typical 12" woofer has an Sd of 420-480 cm²) and an X-max of 12mm. This versatile subwoofer can be used in an Infinite Baffle or Pre-build box depending on the installation.

The external 600 watt Class D Amplifier is the state of the art utilizing software programs to customize each set up giving the customer and the installer the ultimate in flexibility and performance. Consumer utilized controls are front panel accessible while Installer functions are on the back panel. Advanced features such as Automatic Room Equalization and Variable Low Pass Slopes make the finished installation second to none. A second subwoofer module option is provided for on the amplifier which increases the sensitivity of the system to 98 dB. RCC 600 uses standard speaker wire for ease of installation.
